

Creating a desktop entry:

The following example is a working one and it should make things clear.

[Desktop Entry]

```
Name=Telegram
Exec=/home/saarang/Softwares/Telegram/Telegram
Icon=/home/saarang/Softwares/Telegram/icon_telegram.png
Type=Application
Categories=GTK;GNOME;Utility;
```

To use it from dash, you need to copy it to /usr/share/applications.
